Who We Are

ECOVISION GROUP... Since the beginning we had a vision... This vision has taken 6 years to create but we believed that quality and old fashioned hard work would stand the test of time and it has. ECOVISION has from the beginning been a unique collaboration of artisans, craftsmen, and horticultural experts, lead by one of the strongest project management teams in the industry.

We began as an exceptional builder of estate gardens and we have never forgotten our roots. Today, ECOVISION GROUP is a leader in project management, landscape construction, landscape maintenance walls to an ever growing number of residential and commercial clients in India Our vision has become a reality, creating landscapes from dreams, and maintaining them forever with hands that care...

Experience... People... Vision

We are confident that ECOVISION GROUP has both the depth of knowledge, breadth of experience and flexibility to service and respond to your specific landscape design, landscape construction, landscape maintenance.

Our Goal

Our goal is to establish a long term relationship with each of our clients as a value-added partner and a member of your team. We share a common interest to offer expertise and exceptional service to the clients we serve and to protect and enhance the value of your company's and/or your clients' property investments by executing proper care and sustainable property maintenance and enhancement practices.

Why Choose Us

ECOVISION GROUP began as an exceptional builder of estate gardens and we have never forgotten our roots. When servicing your commercial properties, we are bringing a comprehensive, “one-stop-shop” level of expertise rarely found in the landscape industry. We apply that expertise with the same level of nurturing care and exceptional service that we provide our most discerning estate clients.

We care and it shows....

Quality Work with Precision

Professional Services

Our Work Characteristics & Strategies

Horticultural Work

- **Soil** – We try to improve soil quality, at site & also try to consume excavated materials. If soil is not available at the site, then we try to use only such soil, which is most appropriate for the garden & compatible with the immediate environment.
- **Manure** – We try to use maximum organic matter available at site in acceptable form. However, one has to accept partially decomposed dung manure, as there exists, a huge gap between demand & supply of well-rotted manure. In case of non-availability of manure, we try to improve soil property by the addition of required ingredients in right proportions
- **Fertilizers** – At our sites, use of chemical fertilizers is kept as low as possible. We always try to replace chemical fertilizers by animal-borne, plant-borne or soil-borne materials. Branded fertilizers, which are made from 100%, natural sources are also used at sites subject to availability of such materials. However, for initial preparation of the garden, we suggest use small amounts of chemical fertilizers for short-term result & apply organic techniques later as per site condition.
- **Insecticides, Pesticides & Fungicides** – We depend on preventive maintenance, as it has very good results, in plant protection. Timely spraying of required chemical-free insecticides & fungicides, give satisfactory results. However some times due to climatic conditions, pests, insects or fungus spread at a high rate, & it can be controlled only by chemicals effectively.
- **Existing Plants & Vegetation at site** – We try to protect existing trees at site, with top priority & suggest transplanting shrubs or small trees to better location. Proper measures are also taken to avoid soil erosion.
- **Plants** – We insist to use well-acclimatized plants, grown in an appropriate bag or container size, under conditions similar to that of the site & make sure that all plants are free from pests, diseases, Insects & fungus. Storage of plants is done in a most scientific manner.

Our Expert Team

Role of Landscape Contractor

as we see it...

- Man is known by the surrounding he keeps. We believe that the Landscape creates, very first impression as we enter any premises. It gives an insight into the very soul of the place.
- Landscaping involves the joint efforts of various agencies. The Landscape Designer develops a design, for the area under consideration, after a careful scrutiny of various parameters, giving both scientific and aesthetic inputs.
- After this, the work of landscape contractor begins. A landscape contractor executes his work, in the most capable manner possible, as per guidelines given by of the architect.
- Landscape civil work and landscape horticultural work are two different activities performed by the landscape contractor. These two activities take place simultaneously. The activity of civil work finishes first. The quality of civil work is very important as it provides basic & permanent frame to the landscape.
- The finishing work, of horticultural contractor then follows. Irrigation work is carried out through out the duration of the project. Fine grading plays very important role in giving desired & definite shape to the site. Once dealt with fine grading, the plantation of lawns, trees, groundcovers & shrubs begins. The vivid interplay of various shades and colours of the vegetation contributes to the final turnout of the garden. For this final look plant health is crucial. Plant health depends on appropriate preparation of planting media. Different plants require different soil-mixes. After careful consideration to plant variety & climatic conditions plant-specific soil-mix prepared. Maintenance is essential thereafter to sustain and possibly improve the quality of the landscape. Thus the Landscape contractor plays an important role, which manifests itself in the final turnout of the landscape.
- After working as landscape contractors for six years we have set our own standards & schemes, for effective execution of landscape work. We abide by our standards & practices, unless, otherwise is required by our clients or consultants.
